OpenAI Guide

How to use the sponsored credits & the Codex in Claude add-in

April 25th, 2026
Cambridge, Massachusetts

Each Harvard/MIT Hub Team can apply for 50 USD Codex API credits

How to apply & load

1. Fill out the Google Forms – QR Code
2. Activate your account
    1. **Go to:** https://platform.openai.com/settings/organization/billing/promotions
    2. Make **ABSOLUTELY CLEAR** that the upper right corner **does NOT say „start building“,** otherwise your account will not be activated and the **API credits will NOT be usable**.
    3. When the account is activated and you have a **CORP ID**, you can enter the promo code

How to Install the Codex Plugin for Claude Code

A step-by-step guide — easy enough for anyone!

Codex + Claude Code

What is this?

This plugin lets you use OpenAI's Codex right inside Claude Code.
Think of it like adding a second super-smart helper to your coding workspace.
You can ask Codex to review your code, find bugs, or tackle tasks — *all without leaving Claude Code.*

The 6 Steps

1 Open Claude Code

Open Claude Code on your computer — the same way you normally use it. You'll type all the commands below directly into the Claude Code chat or terminal.

2 Add the OpenAI Plugin Marketplace

This tells Claude Code where to find the Codex plugin.
Type this command into Claude Code:

```
/plugin marketplace add
openai/codex-plugin-cc
```

Then press Enter. You should see a confirmation message.

3 Install the Codex Plugin

Now install the actual plugin. Type:

```
/plugin install codex@openai-codex
```

Press Enter and wait for it to finish.
It might take a minute — that's normal!

4 Reload Plugins

This refreshes Claude Code so it sees the new plugin you just installed. Type:

```
/reload-plugins
```

Press Enter.

5 Run Setup

This checks if everything is working and will offer to install Codex automatically if it's missing. Type:

```
/codex:setup
```

Press Enter. If it says Codex is missing, just say **yes** when it asks to install it for you.

Tip: If setup says Codex is installed but you're not logged in yet, go to Step 6!

6 In to Codex (if needed)

If Step 5 said you're not logged in, type this to sign in:

```
!codex login
```

Press Enter and follow the instructions on screen.
It will open a browser window or ask for your API key.

Tip: Already use Codex on your computer? You're probably already logged in — skip this step!

Before You Start — Check These 3 Things

1. **Claude Code is installed**
   You need Claude Code on your computer.
   If you're reading this, you probably already have it!
2. **Node.js version 18.18 or newer**
   Node.js is a tool that runs JavaScript programs.
   Not sure if you have it?
   Open a terminal and type: `node --version`
   If you see a number like **v20.x.x**, you're good.
   If not, download it free from nodejs.org.
3. **A ChatGPT account (even Free works!) or an OpenAI API key**
   Codex uses your existing OpenAI account.
   Sign up free at chat.openai.com if you don't have one.

What You Can Do After Installing

`/codex:review`	Ask Codex to review your current code changes
`/codex:adversarial-review`	Get a tough, skeptical review that challenges your design decisions
`/codex:rescue investigate why tests are failing`	Hand a problem off to Codex to investigate or fix
`/codex:status`	Check if a Codex task is still running
`/codex:result`	See the results of a finished Codex task

Quick first try:
Run `/codex:review --background`, then `/codex:status` to watch it work, then `/codex:result` to see what Codex found!

Structured Guide

Use multi-agent structures & heart beats to let AI work while you sleep

- Drop this file into ~/.claude/skills/ (or your project's .claude/skills/). Then trigger it with: /overnight-loop or /overnight-loop fix all the UX issues in my React app
- **What this does**
  1. Audits your project and writes a numbered task list to ITERATION_LOG.md
  2. Sends batches of tasks to a Codex agent (if installed)
  3. Sets a 30-minute wakeup alarm that fires back into this conversation
  4. On each wakeup: reads the log, launches the next batch, reschedules itself
  5. Stops when everything is marked DONE
- Runs overnight. You wake up to a clean commit history and a completed log.
- PS: Tell it to set a threshold for a 95/100 rating and stop only when reached

OpenAI Sponsorship – Please show your LOVE

The HackNation Harvard/MIT Hub is **sponsored by OpenAI** and the **OpenAI Codex Ambassador Program**:

- Food & Drinks
- API credit

Please **share some love by posting on LinkedIn** and other Social Media tagging them and thanking them:

- https://www.linkedin.com/showcase/openai-devs

Also feel free to tag, connect, and ask questions if you want to learn more about **Codex** or the **ambassador program**:

- https://www.linkedin.com/in/michael-gritzbach/

If there are questions – ask this guy (Michael)
